

# WALL MOUNT FOR MOBILE CHARGING STATION

**>>** THE WALL MOUNT FOR THE LAPP MOBILE CHARGING STATION enables the Mobile charging station to be easily mounted on the wall in a garage, car port, underground car park or outdoor parking space. The optional lockable wall mount means that the charging station is always safely stowed away and conveniently attached to the wall, where it can be removed very easily when required. The Mobile charging station with control box (IC-CPD) is connected directly to the mains power and the integrated control and protection unit controls the charging process via the cable to the vehicle. The wall mount and charging station combination gives you a simple wall box: the wall box light. On the road, the mobile charging station gives you the reassurance that you can always charge from a standard domestic outlet.

## ADVANTAGES AT A GLANCE

- Fast and easy assembly
- User-friendly thanks to intuitive insertion of the Mobile charging station into the wall mount
- Secure attachment of the Mobile charging station
- The Mobile charging station means the charging process is automatic and ends as soon as the battery is fully charged.
